Pruitt® Occlusion and Perfusion Catheters

Safe, Rapid Control of Bleeding
Pruitt® Occlusion and Perfusion Catheters

THE BEST OPTION FOR SAFE, EFFECTIVE VESSEL OCCLUSION:

LeMaitre offers an expanded family of Occlusion Catheters and Perfusion Catheters for a wide range of vessels and procedures where safe and effective vessel occlusion is essential.

**Pruitt Aortic Occlusion Catheter**
Control ruptured or acutely leaking abdominal aneurysms through a 50 cc balloon for positive, secure occlusion. This device is ideal when dissection and cross-clamping are difficult or time-consuming, the aneurysm is difficult to reach, or the aorta is calcified, making clamping undesirable.

**Pruitt Irrigation Occlusion Catheter**
Designed for use in iliac, femoral, and popliteal arteries, this instrument provides effective intraluminal occlusion plus irrigation.

**Pruitt Occlusion Catheter**
For smaller vessels, this soft, pliable balloon instrument provides atraumatic vessel occlusion without clamps or ties. It’s ideal for controlling venous and arterial bleeding in smaller vessels, including tibials, carotids, popliteals, lumbars, and celiacs and occluding vessels during aneurysm repair.

**Distal Perfusion Catheter**
LeMaitre’s Distal Perfusion Catheter is the ideal choice for distal perfusion of visceral arteries during open TAAA or AAA procedures. Attach to external or internal blood circuit and insert balloon end into recipient vessel.

* Simulated clinical testing conducted at 120/80 mmHg. Data on file at LeMaitre Vascular, Inc.

**PRUITT AORTIC OCCLUSION CATHETER**
- Transaneurysmal option for rapid control of bleeding
- Malleable stylet can be contoured for easier insertion
- Migration resistant design stays in place
- Irrigation lumen with stylet and integrated stopcock for irrigation and to prevent back-bleeding

**PRUITT OCCLUSION CATHETER**
- Balloon enables shorter arteriotomy through a smaller incision and faster dissection
- Ideal for placement in smaller areas while keeping surgical field clear
- Clear polyurethane catheter with closed end
DISTAL PERFUSION CATHETER
- High flow lumen provides the following:*
  - 288 ml/min with stopcock detached
  - 272 ml/min with stopcock attached
- Balloon design optimized for visceral artery placement

PRUITT IRRIGATION OCCLUSION CATHETER
- Larger 9F catheter with balloon
- Dual lumen for distal tip irrigation
- Facilitates introduction of heparin, contrast media, or thrombolytic agents
